

## REVIEWS

### **Great Product and World Class Support**

Reviewer: Michael Mepham

CapCal was able to accommodate our urgent load testing needs while providing the best support of any vendor I have ever worked with. Using the CapCal client tools and working with their support team we were able to create robust test scripts and begin testing within a matter of hours. Unlike other capacity planning companies the CapCal service is available on demand – there's no need to schedule a time or set a predetermined load for your tests. You can run them when and how you want. Results are available in real-time as the tests run. This is in stark contrast to other companies where you must wait for the results. This means you can react to test results and make adjustments more efficiently.

### **CapCal - Excellent Results**

I found the folks at CapCal very knowledgeable, flexible and easy to work with. The CapCal Control Panel provided the comprehensive platform we needed to accommodate a very comprehensive set of test sessions and corresponding datasets to test our php/mysql web application. With the CapCal Cloud Burst delivery system we were able to effectively simulate thousands of instantaneous/ continuous users hitting our development environment. The after-test reports provided us with the guidance we needed to streamline our code. I highly recommend CapCal to anyone looking for a fast, affordable performance testing solution. John Hill, President HIL-TEC

### **CapCal with the EC2 Cloud = Heavenly Cost Savings**

I've been working with CapCal since the early days and seen great progress in features and ease of use but leveraging the EC2 cloud has been heavenly in cost savings. Performance testing for us and our clients is highly cyclical in nature and on demand. Housing, feeding and caring for our performance test servers to generate production-size load can be costly in all regards (total footprint) especially when they are not in use...waiting for the next build or release. Amazon EC2's on demand resources and CapCal's full featured ease of use tool and support are a great combination for your performance testing needs. Hiroaki Ajari, Aligned Technology, LLC

## **Great Analytical Tools**

Reviewer: Hank Rainwater

We have used CapCal with great success during daily builds to validate that our application's performance is actually improving. Their tool is easy to use and supplies the architect and developers with key metrics to inform code change decisions. We recommend CapCal to all those shops that want to improve the performance of their software.
